DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-8, 12, 13, 16, and 17, drawn to Image Analysis involving Motion or velocity measuring, classified in class 382, subclass 107.
 - II. Claims 11, 15, and 19, drawn to Image Analysis involving Intensity of image enhancement, classified in class 382, subclass 274.
 - III. Claims 9-10, 14, and 18, drawn to Television involving Moving targets or objects, classified in class 348, subclass 25.
- 2. The inventions are distinct, each from the other because of the following reasons:
- 3. Inventions Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the invention of Group I has an image management device that creates present time plot information by combining the plot information received from the plot information generating devices and then plotting that newly created plot information received from the image management device. The subcombination has separate utility such as an image management device that generates a difference between a present time and previous

Art Unit: 2626

time of the plot information and a separate device that generates a sum of differences generated by the plot information generating devices.

- 4. Inventions Group I and Group III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the invention of Group I has an image management device that creates present time plot information by combining the plot information received from the plot information generating devices and then plotting that newly created plot information received from the image management device. The subcombination has separate utility such as a first plot information generating device that will update plot information at a previous time, an intermediary plot information generating device that updates plot information received from a preceding plot information generating device, and so forth.
- 5. Inventions Group II and Group III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group II has an image management device that generates a difference between a present time and

Application/Control Number: 09/675,049

Art Unit: 2626

previous time of the plot information and a separate device that generates a sum of differences generated by the plot information generating devices. The subcombination has separate utility such as a first plot information generating device that will update plot information at a previous time, an intermediary plot information generating device that updates plot information received from a preceding plot information generating device, and so forth.

- 6. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
- 7. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group III, restriction for examination purposes as indicated is proper.
- 8. Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ashanti Ghee whose telephone number is (703) 306-3443. The examiner can normally be reached on Mon-Thurs and alt. Fri. (7-4PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kimberly A. Williams can be reached on (703) 305-4863. The fax phone
